

## **Incandescent Instrument Replacement Bulbs (Upgrade) – LB1**

### *SUPERIOR BULB LIFE*

This bulb provides a far superior average bulb life over the original factory bulbs and other possible replacements. With an average life of 7500 hours, this bulb will typically outlast other replacements that are rated between 500 and 2500 hours. Available as an individual package or in a set of 10, or set of 11. Save \$ the more you buy!

### *REAL TIME SAVER*

The longer life of this bulb is a real time saver. Anyone who has had to disassemble the gage cluster to change these bulbs, especially in the speedometer and tachometer, knows how much fun it can be (Not!) If installed properly (with a little dielectric grease), it might just be the last time you need to change these bulbs!

### *BULB SPECS*
