

Fusebox Wiring Harness Highlights - FH-01

THE HIGHEST QUALITY COMPONENTS

Our fusebox harness is the solution to your old overworked fuse assembly! Our upgrade mates a heavy-duty ATC blade style fuseholder with all new components and the highest quality wire available. Unit comes complete with (1) 20 amp fuse and (2) 10 amp fuses in the same configuration as the original.

ALL NEW CONNECTORS, ALL NEW TERMINALS – SUPERIOR CONNECTIONS

Our wiring harnesses are made with original style, brand new connectors, terminals and boots throughout. High quality connections are the key to performance. In addition, all connections are crimped, and then soldered for maximum reliability and corrosion protection.

UPGRADED UNIT FITS IN STOCK LOCATION

The upgraded fusebox assembly has virtually the same 'footprint' as the original fuse assembly. The new unit fits in the stock location with no issues, including a new replacement mount that attaches to the stock mounting tab!

AUXILIARY CIRCUIT

At no extra charge, this harness includes an additional fused auxiliary circuit for optional use. When paired with our optional battery harness set BH-01, this will provide a plug and play companion to this fusebox that will also include the same optional auxiliary circuit. This arrangement will provide a fused auxiliary circuit for up to 20 amps.
